

**Stand up  
and drive.**

Simpson Strong-Tie® introduces a new screw-driving system designed especially for metal roofing: the Quik Drive® BDT75A. This innovative tool combines an auto-feed fastening system with a stand-up extension for more efficient screw fixing and reduced worker fatigue. The Quik Drive BDT75A features profile guides (\_\_\_\_\_, ~~~~~, ~~~~~) that center the screw on the roofing profile while transferring the pressure of the fastener to the base of the steel sheet. This minimizes the chance of leaking, crushed or distorted roofs and helps ensure a quality job the first time around.

Fast and easy to use, the Quik Drive BDT75A can greatly increase productivity. Learn more at [www.strongtie.com.au](http://www.strongtie.com.au) or call 02 9831 7700.
