

The **WDS Auto Bar Fixer** revolutionizes the way we tie steel bar and mesh concrete reinforcing materials. The **WDS Auto Bar Fixer** is safe fast and simple to use, it has no complicated set up procedure and even reloading the spool is a simple two step operation. To use the **WDS Auto Bar Fixer** simply push the tool down over the bar to be tied (a little pressure is applied which clinches the jaws over the work) then pull the trigger and the machine does it all for you— sets the wire—ties the wire—then nips the wire— to leave with a neat finish on your job in about 1.6 seconds per tie.

The **WDS Auto Bar Fixer** is versatile as well—the trigger on the tool can be set at the back of the tool to increase its working length or shifted to the bottom centre to use it in an upright set out or confined space situation.

The **WDS Auto Bar Fixer** actually ties the reinforcing bar twice with 1.00mm specially graded zinc plated tie wire; which actually gives you the strength of a 2.00mm tie per joint. The tension can be adjusted on the machine to suit your particular application. Few wearing parts mean for a long life span of the product and servicing is readily available.

Each Tool Kit Contains

- ~ 1 x WDS Auto Bar Fixer
- ~ 10 x Plated Wire spools
- ~ 1 x Battery charger
- ~ 2 x 12V batteries
- ~ 1 x Wire nipper
